### BACKGROUND

Our client is a technology company that designs, manufactures, and markets thin film processing equipment. This enables high-tech electronic device production and development all over the world.

Their developments, improve the human experience by collaborating with the world's leading technology companies to unlock the value of challenging material applications.

### OBJECTIVE

They came to us with concerns in dealing with their supply chain, procurement, and platform sustainability issues.

### SOLUTION

WCA OEM collaborated with our client to help stabilize their supply chain and procurement. The collective goal was to help them create a plan around identifying a sustainable platform that runs their Wet Processing System for the long-term. By working through forecasting and inventory management, we were able to find a solution.

### MOVING FORWARD

In the world of supply and demand, solving these problems significantly reduced their delays. By creating a platform from which they could grow with, we ultimately diminished headaches and found a sustainable way forward.

Thanks to our successful work together, our client is more than eager to continue to expand our reach into their other many solutions.
